

SOFTWARE TOOLS

THE MOST POWERFUL SOFTWARE TOOLS IN THE MARKET— PW-KEYPLAN® AND PW-KEYBEAM®

To help provide customers with the best information services in the industry, Pacific Woodtech supplies its customer base with PW-KeyPlan® and PW-KeyBeam® software packages for drawing CAD-like layouts and designing for either floor or roof applications.

There are many suppliers of structural wood products that may have the need to just simply draw a framing plan and size the beams on beam software or use a layout drawing tool that performs load development upon floor or roof EWP products.

Pacific Woodtech can supply both options to its customer base.

Compare these PW-Keyplan® and PW-KeyBeam® software features with your current system's software to see what you can gain:

- No charge for PW-KeyPlan® and PW-KeyBeam® software programs
- No charge for Pacific Woodtech customers to distribute PW-KeyBeam® to its customer base
- Customer product logos and nomenclature used on beam calcs
- Automatic development of loads
- Automatic sizing of all EWP members
- Engineered or non-engineered placement plans
- Internet updates for all software

All this is available from Pacific Woodtech—but that's not all! No system is complete without a support system, and Pacific Woodtech delivers initial training free of charge. Training is available for all new users whenever needed. Telephone support is available as well. In fact, an electronic submission system is always available to transfer jobs for troubleshooting review.

What you get from Pacific Woodtech is what your customers expect from you—the best tools and the best service possible!
